

Plastic profiles

Plastic profiles can be produced in various types of materials, such as: PE (polyethylene), Nylon or PU (polyurethane). These can be used as a scraper or as a flight. The profiles can be custom-made. Below a number of examples.

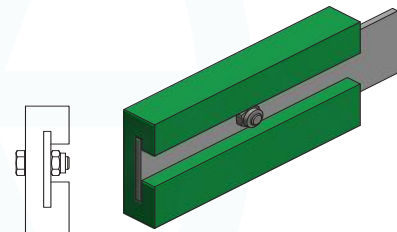

Profile A

Profile A - Plastic flight assembled on the steel scraper.

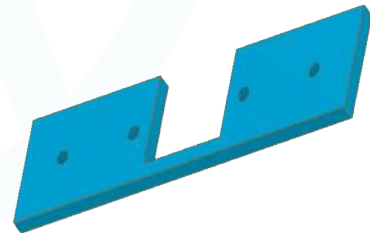

Profile C

Profile C - Plastic scraper which can be pushed over the steel scrapers

Bridge-profile

The "bridge" profile is assembled on the steel scrapers. The plastic runs under the chain and ensures less residue.

"Half moon" profile

The so-called "half-moon" profile is assembled on the steel scrapers.
